

Model 918AC Expansion Board

SPECIFICATION SHEET

Application

The 918AC Expansion Board is designed to provide additional output configurability to the 918AC series System Interface.

Features and Details

- **Non-persist function:** allows each relay output to be reset to its normal condition once the active alarm has been acknowledged
- **Auto-timeout output function:** allows each relay output to be reset to its normal condition after a configurable amount of time. The Timeout value can be adjusted in 3 minute increments from 3 to 30 minutes.
- **Latching mode output function:** allows the relay output to be latched during an active alarm and remain latched until a configurable reset condition occurs

Item Number	Description	Weight (lbs)
918AC-0158 AK	Expansion board	.02

*System Interface sold separately.

NOTE: This 918AC expansion board can be used with any 918AC System Interface purchased after September 9, 2019. The expansion board is sold separately.
